

IN THE SPECIFICATION:

Please amend the paragraph beginning at page 6, line 10, as follows:

--The hollow frame portion 14A also has an integral outwardly projecting rib 28 offset out of the plane of the main panel 12A. The rib 28 forms an outer rim which defines a plane parallel but offset to the plane generally defined by the main panel 12A, and can thus be used to retain the window 10A in a body structure mounted window guides (not shown), securing the window in position against a weather seal (not shown) and preventing the window 10A from being too easily pushed out of the window opening.--
